HIGH PERFORMANCE

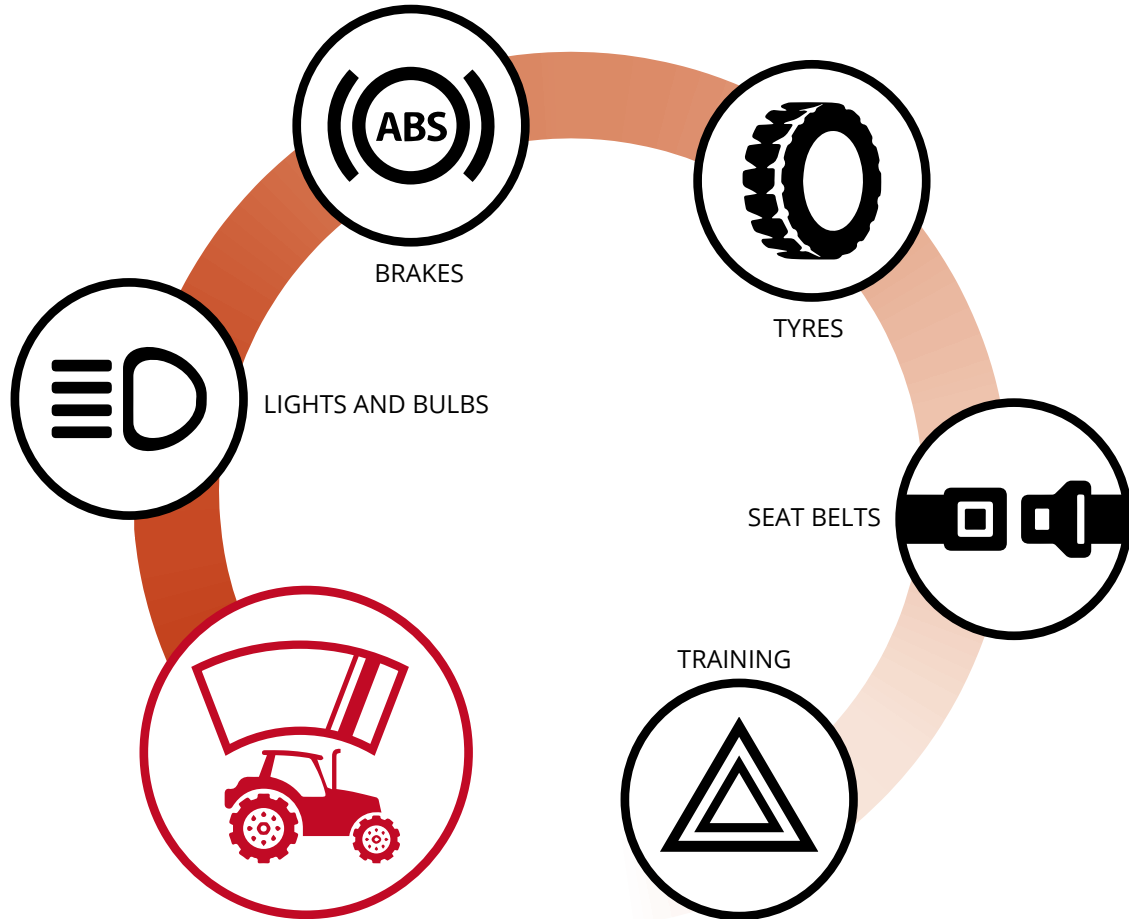

**CASE IH**

# Genuine windows: perfect visibility.

## SAFETY STARTS WITH A CLEAR VIEW.

Optimum visibility on board is ensured by the cabin windows, the first key point in the safety cycle. To stay safe at all times while operating the machine, having excellent visibility is absolutely essential. Only Genuine CASE IH cabin glass provides all the necessary advantages that you will discover in this product Zoom.

### SAFETY CYCLE

### WINDOW VISIBILITY SAFETY

#### GENUINE CASE IH WINDOWS.

ALL GENUINE CASE IH WINDOWS ARE MADE FROM SAFETY GLASS THAT IS EITHER:

#### TEMPERED (ESG)

- Safety glass processed by controlled thermal or chemical treatments. This increases the strength versus 'normal' glass.
- Stronger resistance to impacts, blows, scratches or other possible damage. So less likely to break.
- And even when it breaks, it will do this in tiny fragments with rounded edges, this will reduce the risk of injuries.
- Due to these tiny fragments, other material damages by glass break is almost impossible. So you and your cabine are perfectly protected.

#### LAMINATED (VSG)

- Created by two layers of glass that are glued together by PVC film, which binds all the glass together in case of breakage.
- Zero risk of injury or material damage as the glass will not shatter into the cab.
- Dangerous objects such as rocks can't be catapulted into the cabin in case of impact. The PVC film in the glass will keep objects out.
- Better sound insulation thanks to the acoustic PVC compound interlayer in the glass. So less noise will enter the cabine while operating the machine.

# Why choose Genuine CASE IH windows?

BECAUSE WE ARE THE ONLY COMPANY CAPABLE OF ENSURING MAXIMUM QUALITY IN TERMS OF:

## **SAFETY:**

All Genuine CASE IH windows are made from either tempered or laminated glass. These offer greater stress and impact resistance, providing more effective protection in the event of breakage (bending resistance of 120 Nm/mm<sup>2</sup> versus 45 Nm/mm<sup>2</sup> for a non-genuine product).

## **COMFORT:**

Genuine CASE IH windows have been designed and tested specifically for use in cabins. They filter UV rays to reduce the temperature inside the cabin and limit the deterioration of all the internal parts (resistance at a temperature differential of 200 °C versus 35 °C for a non-genuine window).

## **EASE OF FITTING:**

Products that have been approved and guaranteed offer the same quality and dimensions as the component installed when the vehicle was manufactured. Handles and seals are fully compatible, enabling you to save time when replacing the damaged glass. Our genuine seals also assure that no vibrations are possible, ensuring a longer lifetime of the replacement part and lowering cabine noise at the same time.

# Recommendations for use

**BE AWARE OF THE RISKS ASSOCIATED WITH USING NON-GENUINE WINDOWS.**

## **LESS SAFE:**

Poor-quality raw materials and non-certified production processes fail to guarantee full transparency and effective resistance against impacts. Non-Genuine glass may also shatter into sharp fragments when broken.

## **UNCOMFORTABLE WORKING ENVIRONMENT:**

The inferior quality of non-Genuine windows does not provide effective internal insulation, meaning that heat may be lost from the cabin or that the cabin may overheat, thus increasing the amount of energy used by the heating or air conditioning system.

## **FITTING PROBLEMS:**

Non-standard products are more difficult to fit and more susceptible to the weather. This causes problems with the machine, such as breakdowns that are longer and more costly to repair. Seals have the possibility to not fit 100%, causing vibrations to the glass and lowering the lifespan of the part. Increased risk of breakage and more cabine noise.
