SPECIAL APPLICATIONS

DEMOLITION MADE COMPACT

CX135E XRD Demolition Excavators features tilt cab and high-reach view camera to operate demolition attachments up to 680kg at more than 13m height.

Its retractable undercarriage (2,32-2,92m) enables easy transport and operations especially in sometime challenging urban spaces.

The machine can be customized with oil quick coupling, interchangeable standard arm, long reach functionality and more.

Last and not least, it is CE certified for people safety and your own peace of mind.

EXTENDED REACH

Two-piece boom enables our excavators to deliver superior lifting capacity and digging range. CX24D is just born from our Special Application team in addition to the other two-piece boom models that are available from CASE offering.

CUSTOMIZED SOLUTIONS

Beyond the above solutions our Special Application Team knows how to customize machines around specific needs like military requirements and many more...

DRILLING PLATFORMS

We offer customizable platforms developed on 10 models from 2 up to 10t with either fixed or variable undercarriage for drilling machines, which are sold all around the world by our partners.

FIRE FIGHTING

Another example of our ability to develop tailor-made customer-centric solutions is the TAF35, a remote-controlled fire fighting turbine. A very effective solution for big fires, due to the high extinguishing capability of the aerosol turbine. The remote control enables access to complex building structures.

SPECIAL ATTACHMENTS

Machine work performances and fuel usage are driven by the proper choice of the attachment; our dedicated team develops and validates the best solution for all applications (AUX additional piping, electrical set up, machine settings and joystick replacement if needed for attachments such as tiltrotator, laser-controlled blade, etc...).

GRAY ARM DUAL DNA

Unlike standard CASE excavators, CASE Special Applications excavators can easily be recognized by their gray arm, to highlight our extreme customer centricity and agile product development abilities.

These machines, showcasing CASE colours and logo, are also identified by Sampierana PIN plate since they benefit directly from Sampierana technical support throughout the machines' lifecycle.

SPECIAL YET CERTIFIED

Many challenges are surely already paving your days. For your peace of mind now and later, our Special Solutions are developed with ISO9001 quality standards and come with a CE Certification of the full special machine.

How does it work?

- + Your applications requirements and details are gathered
- + Our tech dept checks feasibility
- + You receive a feasibility feedback and a presentation of the proposed solution
- + Validation
- + Realization
- + Delivery
