4-IN-1 BUCKETS

These Australian manufactured 4-in-1 buckets are designed for strength and durability.

The 4-in-1 bucket consists of a dozer to level, clear & backfill, serrated edges on the jaws allow stronger grip when clamping logs and rocks, and a bucket ideal for scooping, lifting, carrying and dumping material. An extra heavy-duty flat floor is used to give additional strength to the bucket.

4-IN-1 LOADER BUCKETS

4-in-1 loader style buckets are heavy duty buckets designed to withstand tough environments and conditions. The loader style buckets are designed for larger machines with a higher horsepower, and the bucket capacity is larger than the standard 4-in-1 bucket. High visibility is maintained through mesh windows.

TILTING 4-IN-1 BUCKETS

4-in-1 tilting buckets utilizes our industry leading 4-in-1 bucket design with a tilting rear pickup. The low maintenance and high strength design of the tilt control system is coupled with a simple 12 volt solenoid operation. This gives the operator full radial control of the cutting angle.

The unique design means it is possible to continuously vary the cutting edge relative to the inclination of the loaders front wheels. This is particularly useful when working on an incline whilst trying to perform a straight cut.

TILTING COUPLERS

The tilting coupler has a compact design that replaces the machines standard quick attach frame. The tilting coupler has a 17° tilt in both directions and allows the operator to have radial control over any attachment that is placed on the machine.

The tilting coupler gives you the option to tilt any of your standard attachments.

Available with optional electric or hydraulic locking pins.

AUGER DRIVES / TRENCHERS

A wide selection of auger drives, augers, and trenchers is available. Augers, available in both tungsten and rock options, come in various sizes with 65mm round or 75mm square shaft options.

Auger drives range from 2,000Nm to 15,000Nm, providing the power you need. Additionally, trenchers are available with various dig depths and chain configurations.

GRAPPLE BUCKETS

The industrial strength grapple bucket is ideal for demolition work, recycling work, waste management, construction and property clearing. The two grapple arms operate independently to accommodate uneven loads. The grapple bucket has a low maintenance greaseable pivot system and rear mounted cylinders for minimum exposure to damage.

BROOMS

A range of brooms is available in various sizes for different applications ranging from construction to landscaping. The low-maintenance design is available as a 4-in-1 broom, open mouth broom or an enclosed broom.

The 4-in-1 broom has 3 x bolt on edges and an optional hood cover to enclose the broom. Enclosed brooms incorporate an easy change rubber skirt to further the life of your broom and they have an option of a gutter brush attachment.

4-IN-1 BROOM OPTIONS Hood Cover & Gutter Broom

ANGLE BROOMS

The angle broom is ideal for sweeping roadsides, sidewalks, factories, industrial areas, orchards and for moving debris. The angled broom is able to reach more difficult areas than the traditional brooms. With a flick of a switch, the broom can be changed from a normal sweeping broom to an angle broom. The 25o angle, either left or right, allows you to sweep dirt or debris off to the side.

DOZER BLADE STICK RAKES

The dozer blade stick rake consists of a heavy duty dozer blade and a stick rake combination. Rake and level with one attachment. The dozer blade includes a standard replaceable bolt on edge and is ideal for moving large amounts of sand, soil and debris.

The heavy duty stick rake tynes are ideal for clearing and raking.

Best suited for construction, farming, forestry and mining environments.

ANGLE & TILT DOZER BLADES

Available as an angle only or angle and tilt configuration, the heavy duty dozer blade is the ideal attachment for precise trimming, grading and backfilling.

With an angle function of 28° each way and a tilt function of 17° each way this attachment provides the ultimate level of control.

Angle and tilt blades are available as a plug and play option for most machines and require no additional hydraulics to be fitted.

GRASS SLASHERS

The floating frame on the grass slasher and the adjustable side skids allow this attachment to clear grass and low level shrub areas, making it an ideal attachment for council work and landscaping.

To provide further stability, a jockey wheel may be added as an optional extra to the 4ft, 5ft & 6ft grass slashers. The 7ft grass slasher is supplied with dual jockey wheels.

Grass Slasher sizes for skid steers - 4ft, 5ft, 6ft and 7ft.

Grass Slasher sizes for excavator - 4ft and 5ft.

High flow option available.

RIPPERS

Front and rear hydraulic rippers are available.

Hydraulic rippers are designed to excavate the toughest material.

Rear rippers are custom made to suit different machines with an option of 4 or 5 tynes. Easily replaceable tynes are fitted with heavy duty ripper teeth.

Available in kit form or can be custom fit to your machine.

BACKHOE ARMS

The backhoe arm increases the flexibility of your skid steer loader machine with a trench bucket attached to a hydraulically operated dipper arm.

With a 70° swing each way, the slew or “swing” design eliminates the need to move the machine to empty the bucket which is ideal when working on lawns or other surfaces that can be ruined by skid steer and track machine movement.

You can dig, slew and dump material with a smooth operation from inside the cab.

CONCRETE BUCKETS

The hydraulic driven concrete bucket has a spike to split cement bags.

The strong custom mixing system rotates and mixes the concrete which can be viewed through the open heavy duty caged front. Once the concrete mixture is ready, the flight rotation is reversed with a flick of a switch, this action will direct the concrete out the side shoot making it easy to fill holes.

Concrete buckets have side and front discharge and they are available with manual or hydraulic opening.

PALLET FORKS / SPREADER BARS

The heavy duty multi functional pallet forks are ideal for lifting and moving heavy material within the construction, mining and farming industry. The guard has been designed for high visibility to help operators when loading and unloading. Tynes can be adjusted to alter the width spacing depending on load requirement.

The spreader bar is easily attached to a 4-in-1 bucket and is used to level areas of gravel, sand and rubble. The pick-up points are designed to reduce stress on the bucket.

Available in various widths and lengths.

RAMPS

Aluminium ramps are available with a carrying capacity of 1.5–8.0 tonnes. These ramps are designed for steel or rubber tracks and pneumatic tyres.

The ramps have been designed to prevent bottoming out when loading and unloading. Ramps are supplied with forged locking pins to ensure a safe, secure attachment to the loading plate.

Ramps are 3500mm in length with a track width of 325mm – 500mm.

AUSTRALIAN-MADE ATTACHMENTS

Manufactured by Norm Engineering, our attachment range is designed to help you tackle more jobs with your New Holland Construction Equipment.

From buckets and pallet forks to grapples, augers and trenchers, every attachment is built for Australian conditions and backed by a 12-month warranty.
