

Optimize your fleet for greater efficiency and profitability.

» PRODUCT OVERVIEW

- IntelliField™ is an in-field data sharing product that allows multiple vehicles to work in the same field while simultaneously sharing boundaries, straight guidance lines, and real-time coverage data*.
- This intuitive feature utilizes a cloud-based infrastructure and cellular data technology to facilitate the exchange of data between vehicles. Connect up to 6 vehicles in a field all within the same job for perfect parallel passes.

*Section Control operation based on combined coverage of all vehicles at the field level.

DID YOU
KNOW?

50%

Adoption of automated guidance has risen sharply in the past 20 years. **Adoption rates are greater than 50% of planted acres** for corn, soybeans, cotton, winter wheat, rice and sorghum.

KEY BENEFITS

- **Shared coverage maps** allow section control for all vehicles based on combined coverage maps
- Achieve **higher quality yield maps** with Auto Cut Width
- Auto creation of **identical Grower/Farm/Field names** in all active vehicle displays when new fields are created
- **Easier operation** for less experienced operators

DATA SHARING AT-A-GLANCE

Boundary sharing

Live coverage map sharing

Guidance line sharing

Sync data between different types of machines

Share data between up to 6 machines

» HOW IT WORKS

1. **To utilize IntelliField™ functionality**, users must have a connected machine. Either with PLM Intelligence (IntelliView™ 12) or a PCMf installed on legacy machines (IntelliView™ IV).
2. **Once connected**, you will need an Autoguidance system, an active MyPLM Connect Advanced subscription, and a PLM IntelliField subscription.
3. **To share data**, create a job and have all users in the same field join that job. Data will then be shared from machine to machine, regardless whether they have an IntelliView™ 12 or IntelliView™ IV display.

*I appreciate the ability to verify we harvested every acre, and it matches **exactly** what we seeded.*
