FluidAnalysis

KEEP YOUR MACHINE HEALTHY

WITH PREDICTIVE FLUIDS ANALYSIS AND TESTING

WHY CASE FLUID ANALYSIS ?

The regular sample analysis of your machine's main fluids – engine oil, transmission and hydraulics oils, coolant and axles – is a **valuable health check** that provides a picture of what is happening under the hood.

It can flag up potential concerns that may develop into machine-stopping issues, so that **corrective maintenance** can be efficiently planned **before an actual failure occurs**.

It can also help your CASE Dealer with **diagnostics** by pinpointing the source of fluid contamination, which can cause serious failures and shorten your equipment's life.

CASE Fluid Analysis is proven to be **the easiest and most cost-effective** way to reduce the risk of potentially expensive repairs, **maximize uptime** and **extend your machine's lifespan**.

HOW? EASY!

You will receive an easy-to-read report by your CASE dealer.

If the results flag up an issue, your CASE Dealer will be able to take immediate action to resolve it.

For added peace of mind, bundle your CASE Fluid Analysis program with the full **CASE Service Solutions** offering

CASE CARE*

Maximize your machine's uptime and efficiency with this planned maintenance program.

CASE PROTECT

Avoid unexpected costs with this extended warranty program.

CASE FLUID ANALYSIS

Ensure your machine's uptime with detailed fluid reporting.

CASE CONNECTED SERVICES

Boost your machine's profitability and improve uptime with SiteWatch and SiteConnect.

**AVAILABLE ONLY IN SELECTED EUROPEAN MARKETS, CONTACT YOUR LOCAL CASE DEALERS FOR MORE DETAILS.*
