# **AXIAL-FLOW COMBINE HEADERS**

Corn Head | Draper Head | Grain Head | Pickup Head

## DESIGNED TO MATCH THE CAPACITY OF AXIAL-FLOW COMBINES

Case IH header options deliver consistent performance and durability, regardless of crop or conditions, allowing you to harvest more of what you grow. Just like the combines behind them, Case IH headers are simple to set and adjust, intuitive to operate and help deliver the highest-quality grain to the hopper.

<sup>44</sup> We liked it from the get go, it was easy to use, easy to make adjustments, and performed well. It picks clean and feeds smoothly, with less than 1% loss.<sup>77</sup>

Thomas Sandt, Lake Crystal, MN

# **A PERFECT MATCH**

Find your perfect flow of grain from the field to the bin with header options from Case IH. Maximize grain quality, minimize grain loss and improve profitability with a Case IH header specifically engineered to match the capacity of your Axial-Flow combine. From industry-leading grain savings to exceptional retained value, Case IH headers are built to last and deliver a better return on your investment. And with seven header series matched to the capacity of your combine, Case IH offers the broadest and most competitive lineup of headers in the industry.

## RELIABILITY

 To provide the highest-quality levels of reliability,
 Case IH extensively tests headers in both lab and field conditions worldwide and in different crop types and harvest conditions.

## **GRAIN SAVINGS**

 With fluctuation in today's grain prices, harvesting more of what you grow is critical and the standard to which Case IH upholds when designing its headers.

## PRODUCTIVITY

 Case IH headers are designed for high-horsepower throughput and match capacity levels of Axial-Flow combines.

#### SIMPLICITY

 Case IH headers have fewer components and easy setup and maintenance. This uncomplicated design allows you to spend more time harvesting your crop.

#### **HIGH-EFFICIENCY FARMING**

• At Case IH, our goal is to help you **make the most of every input and every season.** It requires breaking through the status quo and achieving the most efficient harvest possible with the best use of land, seed, fertilizer and equipment.

A large, open front-gathering chain sprocket sweeps stalks efficiently into rolls and helps harvest downed cornstalks.

Pinching stalk rolls power feed the cornstalk directly into the path of the chopping blade and consistently deliver a 3- to 6-inch chop length.

Patented CornLouvers<sup>™</sup> channel ears of corn and any loose kernels into the auger to ensure loose grain makes it into the combine.

## SETTING THE HARVEST BENCHMARK AND PIONEERING COMPATIBILITY WITH **4400 SERIES CORN HEADS**

Case IH headers set the **industry benchmark** for corn harvesting and provide the greatest return on your investment. The 4400 series corn heads are designed to harvest more efficiently, better matching today's higher-horsepower combines and faster harvest speeds. From the stalk roll spirals, to the diameter and length of the stalk rolls, to the speeds of the gathering chains and the gearboxes, the headers are carefully matched, allowing you to pick each kernel of corn at faster ground speeds and in adverse conditions.

### CASE IH CORN HEADERS ARE DESIGNED TO PICK CLEANER

From the profile of the dividers and hoods to the length and speed of the stalk rolls, every aspect of the corn head is designed to cleanly pick and gently move ears into the feeder house.

- Pinching-style stalk rolls are designed to cleanly pull the stalks through the row unit and deck plates and gently snap the ear off the stalk to minimize grain loss.
- The deck plates are gently curved downward to minimize butt shelling and ear toss. This helps save more grain and channel it into the auger trough.
- The **pinching style stalk rolls** pull the corn stalks and leaf material through the row unit and allow the deck plates to cleanly snap the ear off the stalk. This reduces the amount of stalk and leaf material being ingested into the combine.

#### CORN HEAD MOD

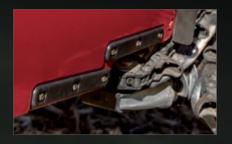

Spacing

Configuration

Combine Model Compatibility

Case IH offers folding corn heads in 8-row and 12-row configurations. Capable of **folding into transport mode in** less than a minute, folding heads dramatically improving transport efficiency, and, ultimately, field productivity.

**Replaceable wear strips** are easy to service, keeping you in the field during optimal harvest windows.

Heavy-duty drives with aluminum gear case housing reduce weight and increase strength by 20% for high-speed harvest.

## CASE IN CORN HEADERS: WHERE HARVEST SPEED AND EFFICIENCY MEET

Increase grain quality and cover more acres each day with Case IH 4400 series corn heads. These corn heads are built with advanced features and deliver even more productivity to help you keep the grain flowing. Plus, the durable header design reduces maintenance requirements so you spend more time in the field.

### TAKE PRODUCTIVITY TO THE NEXT LEVEL

- A narrow, smooth **divider profile** and flatter angle of the 4400 series dividers guarantee excellent picking ability in both standing and downed corn with minimal cob losses.
- The **stalk roll spiral** is designed to smoothly and evenly feed the stalks of even the highest-yielding corn varieties into the row unit.
- The Automatic Header Height Control (AHHC) provides smooth and consistent header height response in ever-changing field conditions, improving harvesting efficiency and reducing operator fatigue.
- In-cab, hydraulically-adjusted **deck plates** allow operators to carefully match deck plate clearance to various corn varieties and conditions, enabling clean, efficient picking.
- A **chain removal tool** that makes quick and simple work of removing or replacing a gathering chain is now standard.
- All 4400 series corn heads can operate **Hydraulic Spiral Dividers** to gently lift and move stalks into the header in down and tangled crop conditions. The optional spiral dividers can also be added as a field-installed attachment.

#### THE 4400 SERIES CORN HEAD ADVANTAGE

- **Pick cleanly and optimize residue management** with headers designed to ensure every kernel ends up in the hopper while the row unit efficiently processes the stalks.
- Case IH 4400 series heads offer substantially increased **harvest speeds of 3 to 6 mph** and better match corn heads to your combine's capacity and power.
- Available in standard or chopping configurations, the 4400 series chopping corn heads offer rotating blades positioned under the stalk rolls that spin at 2,880 rpm and provide consistent chop lengths of 3 to 6 inches. The stalk rolls power-feed the corn stalks directly into the path of the rotating blades, providing consistent chop quality even at faster ground speeds and higher plant populations. The chopping mechanism can be disengaged on an individual row unit, allowing a quick transition from chop to nonchop when required.
- Compared with leading competitive designs, Case IH corn heads optimize the productivity of your Case IH Axial-Flow combine.

#### NARROW ROW CONFIGURATIONS

- Available in 20- and 22-inch spacing for 12-, 16- and 18-row models.
- Reduced row unit weight (over 100 lb. per row) and a better center of gravity.

#### **DIVIDERS AND HOODS**

- New inner hoods and dividers for narrow row spacing and weight reduction.
- New outer hoods to accommodate tall corn attachment and auger divider.

### FRAME

- Provisions to accommodate split driveline architecture.
- Multiple configurations on same frame and common tooling.
- Increase clearance to standing crop.

#### ROW UNIT AND CHOPPER DRIVES

- Separate drives for choppers and row unit components provide more efficient power flow and torque management.
- Gearbox replaces chain drives for improved durability.
- Parallel linkage on hydraulic deck plates keep the deck plates properly centered over the stalk rolls.

#### CHOPPING

- All configurations are chopping capable.
- Includes chopper overload protection.
- Choppers can be disengaged by flipping a lever on each individual row.

## MACDON FD2 SERIES FLEXDRAPER ACHIEVE UNMATCHED HARVESTING EFFICIENCY

The MacDon FD2 series FlexDraper helps you maximize harvest productivity thanks to a heads-first feeding design. This superior system lays the crop down to feed it smoothly and evenly into the combine. This allows for faster ground speeds and is particularly beneficial in tough, bushy crops and adverse conditions.

## PRODUCTIVITY AND EFFICIENCY

- Maintain a close reel-to-cutterbar relationship, even at extreme flex, with a **floating three-section flexible header** and double and triple reel configurations. The entire header frame, cutterbar, and reel follow ground contours as a complete unit, flexing up to 17 inches on either end.
- Achieve a clean, close, even cut every time. **ContourMax™ Contour Wheels** allow the header to follow the field's contours, leaving a consistent stubble height while cutting up to 18 inches off-the-ground.
- The **Active Float System** supports up to 97% of the header's weight, allowing you to glide seamlessly over rises and divots.
- Perform clean, fast cuts and maximize your crop's yield with the **ClearCut High-Speed Cutting System.** A heavy-duty output shaft, direct hydraulic drive and flywheel for smooth operation allow you to cut through the most challenging condition. In addition, a longer blade and optimized knife shape delivers quick and clean cut quality, even when running at high ground speeds.

Prevent shatter on the ground with ShatterGuard Reel Positioning. Standard on all FD2 models, this adjustment is designed to handle tall, brittle and bushy crops.

A high speed cutting system delivers clean, consistent cuts at up to 30% faster speeds.

The FD2's ClearCut High-Speed Cutting System delivers just that: a clean cut at faster speeds.

Abadibat and a Madill

# HARVEST MORE OF WHAT YOU GROW

Get harvesting earlier and run later at night with the head-first feeding of Active Crop Flow. Efficient even in damp and moist conditions, head-first feeding maximizes your efficiency with better straw distribution for a smooth, consistent crop flow.

- A floating three-section flexible header with double and triple reel configurations allows the header to closely follow ground contours — even in changing field conditions.
- The FD2 features up to **17 inches of flex range** allowing you to maximize crop recovery.
- A **triple reel option** features three reel sections that mirror the flexing points of the header, giving you an even closer reel-tocutterbar relationship for smooth, consistent, heads-first feeding. Available on 40 foot and standard on 45 and 50 foot FD2 models.
- Easily move from field to field at speeds up to 20 mph with the EasyMove<sup>™</sup> Transport System.

- with a simple lever.

Two knife guard options to consistently deliver clean, close cuts:

• Pointed Knife Guards, multi-purposed and engineered to glide over the field, even at high cutting speeds.

PlugFree Knife Guards, designed to resist plugging in even the toughest conditions while still delivering a close, clean shave.

An industry-exclusive **low-speed transport system** (25 mph or less) allows the operator to deploy the transport package with the touch of a button, saving time when moving from field to field.

• The FD2 is a **multi-crop harvest solution.** Switch easily from a flex to a rigid frame header

ALLER THE PROPERTY OF THE PROPERTY FOR THE FULL PROPERTY OF

Carrydressinances manuanananan

A DESCRIPTION OF A DESC

• A low-profile cutterbar minimizes seed loss by enabling a short distance from knife to draper.

• Knife drive, knife sections, and a choice of knife guards provide you the power, efficiency, and durability needed to cut through even the most challenging conditions.

• An **ultra-deep deck** with 50-inch-deep drapers delivers up to 20% more capacity while keeping even the toughest, bushiest high-volume crops moving smoothly with consistent heads-first feeding.

### A CLEAN CUT, EVERY TIME

- ClearCut High-Speed Knife Drive provides more torque to power, allowing you to speed through cutting in even the most challenging conditions.
- Achieve a faster, cleaner cut at high ground speeds with ClearCut Knife Sections, featuring over 25% more cutting surface thanks to a longer blade and improved geometry.

# **BUILT TO HANDLE TOUGH CONDITIONS**

Float over ground contours and cut through bushy crops in challenging conditions. Designed to provide you the power and durability to efficiently harvest your crop, the FD2 is engineered to keep your combine moving.

 Choose from ClearCut Pointed Knife Guards and ClearCut PlugFree Knife Guards to customize your cutting system to your operation's field conditions.

#### PICK UP ALL YOUR CROP

- The FD2 reel features a uniquely shaped cam that allows the fingers to get underneath lodged crop and pick it up before it's cut.
- In-cab header and reel controls allow you to adjust draper and knife angle and fore-aft reel positioning.

#### MAKE HARVEST EASY

- Conveniently stored onboard the header, the Set-It-Right Multi-Tool lets you make regular header and reel positioning quickly and easily.
- Switch from a flex to a rigid frame header with a simple flip of a lever.
- From the cab, control side draper speed, header tilt, ground pressure, reel position, and contour wheels for cutting height up to 18 inches.

# CUT MORE OF THE CROP YOU GROW WITH A 2030 RIGID AUGER HEAD

The 2030 rigid auger head handles a wide variety of crops in diverse conditions, such as downed crop, tangled crops, uneven terrain and muddy soils. The powerful and robust design delivers gentle cutting and feeding of the crop into the combine for increased grain savings and grain quality.

#### DURABLE TO THE MAX

- The robust, rigid frame was developed using two reinforced strengthening webs for better durability.
- **Double-skin skid shoes** assure long-term durability and reduced ground pressure, providing better flotation.
- Header hookup is easy with single-point hydraulics, dedicated electrical connector and 60-degree free-rotation PTO shafts.

### EVEN FEEDING

- **Six-bat reel** design positively engages the crop, gently lifting it over the cutterbar and across the auger floor.
- **Offset steel reel tines** provide efficient pickup and are easy to replace.
- A powerful hydraulic reel drive provides smooth even reel operation, even in heavy, green straw and in high-yielding conditions that would typically produce heavy reel loads.

### EASY CUTTING

- Tough **double-cast steel fingers** are designed with maintenance-free internal knife guides.
- **Spare knife** sections are located under the left-hand shield for quick and easy replacement.

# THE GREATEST CHOICE OF HEADS **TO GIVE YOU THE GREATEST YIELDS**

Simple, reliable Case IH head designs deliver consistent performance and durability, regardless of crop or conditions. Just like the combines behind them, Case IH heads are simple to set and adjust, intuitive to operate and help you deliver more high-quality grain to the tank. With heads as wide as 50 feet, they deliver a steady stream of grain to match the high capacity of machines like the Axial-Flow 9250.

### CORN HEADS

Case IH Corn Heads are designed to pick cleaner, harvest faster, grab more down corn and save more grain. The corn heads incorporate the latest innovations in harvest technology, with features that maximize your time in the field and minimize your yield loss.

Case IH 6 to 18 row corn heads-available in narrow or folding configurations-provide increased corn harvesting speeds and consistent chop lengths to help increase productivity without sacrificing chop quality. Always made in America.

#### PICKUP HEADS

The Case IH rigid auger grain head is designed to match the high horsepower combines of today, offering faster harvesting speeds and the adaptability to tackle different crop conditions effectively. It can handle a range of challenging situations, including tangled and downed

The Case IH pick up head is ideal for small-grain harvesting like cereal, grass seed, and more. Our simple, proven design helps minimize seed loss, while extra picking fingers and adjustable belt speeds allow for increased performance in tough conditions.

#### DRAPER HEADS

Case IH draper heads offer both rigid and flexible cutterbar configurations, variable draper speeds, a wide range of cutting widths, and a head-first feeding design for unmatched harvesting efficiency.

Weed Knives (Single Piece)			Adjustable					
Row Unit Drive			Enclosed in gearbox – spur/bevel ge	ars				
Stalk Roll Length			23.4 in. (594 mm)					
Stalk Roll Diameter			4.25 in. (108 mm)					
Stalk Roll Speed (Nominal)	1,062 rpm	1,0	058 rpm	1,063	2 rpm			
Gathering Chain Speed (Nominal)	348 fpm	3	49 fpm	348	fpm			
SLIP CLUTCHES								
Row Units			1 per row radial pin					
Auger Drive			1 per auger radial pin					
STRIPPER PLATES								
Hydraulic	Parallel linkage; hydraulic     Hydraulic adjustable     Parallel linkage; hydraulic adjustable							
Stalk Stompers (Available Through Part Marketing)			Optional					
Automatic Front Height Control/Lateral Tilt			Optional/pre-wired in main harnes	S				
HEADER DATA								
Header Jackshaft Speed								
4400 CH On 7010/8010/20 Series			575 rpm					
Auger Diameter			15.75 in. (400 mm)					
Auger Tube Dimension			6.3 in. (160 mm)					
Flighting Pitch			19.7 in. (500 mm)					
Reverse Flighting			No
